Stone

Authorized Contractors

Fully engineered installation specs ensure all roofing requirements are planned in advanced. Our authorized contractors have received extensive training to ensure consistent quality workmanship.

Eco Sustainability

Energy Efficient: Reflectivity reduces cooling costs

Solar Ready: Light weight, durable and fire resistant

Waste Deferral: Can be used as a successful retrofit system

Life Cycle: Fully recyclable now and in the future

Green Roofing: The perfect system for vegetative rooftop systems

Implementation

Developed for minimal disruption during installation and accompanied with accessories for custom applications. TRUE SEAL™ manufactures with precision fabrication guaranteeing each project is intentionally designed for success.

PROTECTION

Same trusted and proven formulation since 1978. Custom fitted to your individual building. Able to meet every project need, TRUE SEAL ensures maximum protection for each unique roof system.

DURABLE

Our membrane has recieved extensive testing and has passed strict standards for water, fire, wind and UV resistance. All TRUE SEAL products have achieved top class ratings for each of their respective applications.

ENVIRONMENTAL

100% reclaimable membranes allow for TRUE SEAL roofs to be removed and recycled at the end of their very long lifecycles.

RESISTANT

Permanent bonds activated by heat-welded seams form a solid barrier, impervious to water - in fact: True Seal has no exclusions for Ponding Water; ponding water will not affect the watertight integrity of your True Seal Roof system . Resulting in a lasting product that will withstand the test of time.

IMPROVEMENT READY

TRUE SEAL membranes are capable of modifications and are ready for add-ons such as daylighting and solar panels. A low-upkeep design maximizes your return on investment in a TRUE SEAL PVC roof system.
